

Message from the President (2018-2021)

Prof. Chet Raj Bhatta

Dear all mathematicians

I would like to express my deepest gratitude to all the valued life members of Nepal Mathematical Society (NMS) for their help in electing new executive committee (EC) unanimously for three years' (2018-2021) tenure. I can never forget the enthusiasm, dedication and contribution of the former presidents of NMS and the respective EC members, who brought forward the society's academic activities among mathematics community. I always salute and appreciate their endeavors and dedication in this sphere. Now, the former EC has handed over the responsibility to us. The new EC is committed to have close coordination with the former EC regarding various academic and professional issues and crave for their invaluable assistance. Our motto is **Let's Work Together** to acquire the new heights for NMS in national and international arena.

NMS can bring substantial changes both in educational and informational aspects underscoring the theme-**Teaching, Training and Research**. There are various challenges for us, however, we believe, or until there is no challenge, no academic transformations can be achieved in such professional society. We are committed to face every challenge. Our valued life members strongly believe that if a common vision and goal of the profession and aggregate efforts, thoughts and ideas of members work together, NMS will gain new heights in the days to come. NMS will put forward its steps organizing workshops to improve technical writings of Nepalese Mathematicians as well as pedagogy for those who are involved in teaching in grades XI and XII. NMS already has its own journal and its continuity with indexing procedure will be taken into account. NMS will also seek external funding to support graduate students and faculty research activities. We will organize more events and professional activities to realize enhanced impacts for productive teaching/learning and research.

NMS always keeps professional relationships with other mathematical societies in Nepal as well as with Association of Nepalese Mathematicians in America (ANMA). NMS will strengthen deeper relations with Silk Road Mathematics Centre, Beijing, The Indian Mathematics Consortium (TIMC), IMU, SEAMS, Simons Foundation and many other professional organizations home and abroad in coming days.

Chet Raj Bhatta
NMS President
